

## **Desktop VS. Browser-based Application?**

The answer depends on what features are required in the program. If the program requires a basic user interface for data entry and display, a browser-based application will do. If a more sophisticated interface is required, a desktop application may make the better choice. That's why a company like Microsoft delivers solutions, such as e-mail, in both the desktop and browser-based formats.

Agnovi will soon be releasing a browser-based version of our technology. More information will be made available on our Web site.

## **On-site VS. Third-party Storage (Software as a Service)?**

If your organization is accountable for the security of the data being collected, store it at your own site. It's that simple. Hardware is inexpensive and managing information is easier than ever. Off-site storage, inherent in the 'software as a service' model, simply adds a vulnerable layer to your overall data security.

## **Build VS. Buy?**

Software development and maintenance is time consuming and expensive. Key software developers often move on to other projects once a software application has been implemented. Losing key team members can result in lower productivity rates and can negatively impact overall software quality. If the software is available, you should explore buying it, you will benefit from economies of scale and continuous feature and quality improvements.

Agnovi offers fully-customizable solutions to meet your requirements. For more information, [contact Agnovi](#).

## **Are additional third-party software purchases necessary to successfully implement Agnovi solutions?**

Not necessarily. Agnovi provides fully-integrated commercial-off-the-shelf solutions. Third-party software including application server, relational database, business intelligence tool and visual analytical tools are embedded in those solutions as applicable.

## **Can our data be collected from disparate sources and mined for metrics, performance measurement and trend analysis?**

Not a problem. Agnovi experts can collect your data into an integrated data warehouse for metrics, performance measurement, and trend analysis. For more information, [contact Agnovi](#).

## **Why Agnovi?**

For over 10 years, Agnovi has worked with top investigators, inspectors, and intelligence professionals to develop solutions that meet their needs. Agnovi is an innovative company, carefully crafting their solutions to ensure best-of-breed functionality. Agnovi is a proven enforcement software provider helping leading enforcement agencies leverage the information at their disposal.
